How to reset the LCS software to control the microscope

If you find that you cannot control the SP2 microscope system from within the LCS software, it may be due to a configuration error. To determine if that is the case, open the LCS software and from the “tools” dropdown menu select “microscope”.

If the highlighted selection is “DM Manual-7”, or anything other than “DM IRE2 (SDK)”, change it to “DM IRE2 (SDK)” and click the “Initialize” button.
